

1. Title of the Practice:

Green Initiative program on the college campus

2. Objectives of the Practice:

- 1) To balance environment by making campus green
- 2) To increase resilience of eco system
- 3) Help to minimize climate change effect as a small effort
- 4) To reduce pollution in the year and conserve vegetation
- 5) To inculcate environmental awareness among students.

3. The Context: —

Human life is completely dependent on nature. Trees are an important element of nature. Earth's atmosphere and nature's cycles are balanced by trees and human life is what it is by trees. So there are many benefits of planting trees in the college premises. Trees are friends of human being. We get fruits, flowers, shadow from the tree and it is used by students, teachers, other employees. The tree keeps the atmosphere cool, pollution is reduced, soil and water are conserved, birds and animals are also benefited and therefore considering all such benefits the college has deliberately chosen this practice on the college campus.

4) The Practice:

We deliberately planted some trees while planting trees in the college premises. It contains Pimpal, Jackfruit, Mango, Tamarind, Coconut, Amla, Neem, ALmond, Gulmohar, Karanji, Ashoka, Funus, Liu Chiku and other various types of flowers plants have been planted.

Jambul, Mango, Tamarind, Amla, Fanas, Chikku Peru, these fruit trees have been planted. If possible fruit will be used for the financial benefit of the college in the future and the phulzada includes paper flowers of various colors, roses, Kaner, Jaswand, Chafa, Parijat, Z. Sonchafa trees are planted. This definitely adds to the camaraderie of the college. Some of the trees will definitely be used as forest medicine.

5. Evidence of Success:

490 trees have been planted in the college premises during the period 2014-2015 to 2021-2022. All plants are alive. These trees are growing well. Today it is used by college students, teachers, and other staff. It is also beneficial for birds too. Due to this, the air in the area remains cool and the amount of pollution is reduced. It has helped drain the rain water in the college area. So here the water level of the cupola has fallen.

6) Problems Encountered and Resources Required:

The college falls in a fertile shade region so we have planted around 410 trees to create a climate where rainfall is moderate. During this period, mainly two issues had to be met is that it was a challenge to keep the trees alive in summer so the tree trunks were covered with chaff. The trees have been revived by supplying water through tankers. A lot of efforts had to be made for safety.
